Enhance Hyperion Reporting
Hyperion Planning achieves more with BI integration.

Jump Start Overview

AST enables rapid implementation of Oracle solutions in 6-10 weeks with greater time-to-value and minimal risk. Our proven methodology is based on best practices and provides:

– Standardized Approach
– Targeted Analysis
– Readiness Checklist
– Installation/Provisioning
– Base Configuration
– User Training/Knowledge Transfer

AST Jump Start Options

– Enhanced Hyperion Reporting Jump Start
– BI Cloud Services (BICS) Jump Start
– Oracle Analytics Jump Start

Get better, faster data with quick business analytics from Oracle and AST for your entire organization or individual departments. You decide which critical information has the highest priority and how best to visualize it. AST helps you plan and configure the tools.

Oracle Business Intelligence Enterprise Edition (OBIEE) can extend your Hyperion Financial Reporting (HFR) capabilities. Are you limited in the number of data rows you can return? Do you need better enterprise-level reporting? OBIEE brings unmatched power, along with comprehensive reports, charts and dashboards, to the table.

OBIEE integrates with your existing Essbase to achieve:

Faster Query Response—OBIEE achieves "speed-of-thought" query response times through the power of Essbase.

User-Defined Dashboards—Customize OBIEE to group reports in a single view, by department or by functional subject area.

Enhanced Visualization—Rich, intuitive, crisp views that heighten the user experience and promote maximum productivity.

Advanced Calculations—A highly advanced calculation engine handles simple aggregations or complex cross-dimensional allocations out-of-the-box.

Trend Analysis and Write-back—Identify trends and relationships to produce forecasts and what-if scenarios.

Fully-Leveraged Toolset—Capitalize on existing OBIEE licenses if you have them, or AST will work with you to obtain discounted pricing.

Specialized. Recognized. Preferred.

We focus precisely on deploying OBIEE to use multidimensional data sources, allowing the BI Server to connect to sources such as OLAP. Organizations benefit from the legendary reporting and analytical services of OBIEE while streamlining performance and complex calculations in Essbase.
