# EBS and WAM Integration

## Modernizing and optimizing your supply chain processes.

### Key Benefits

- Solution ensures consistent two-way communication between EBS & WAM
- Pre-built integration solutions include inventory, vendors, accounts, requisitions, purchase orders, receipts, invoices, and payments
- Pre-built integration tools speed time to delivery
- Product-based, end-to-end process integration for Work Management and Asset Management business processes
- Available pre-built tools add features and flexibility

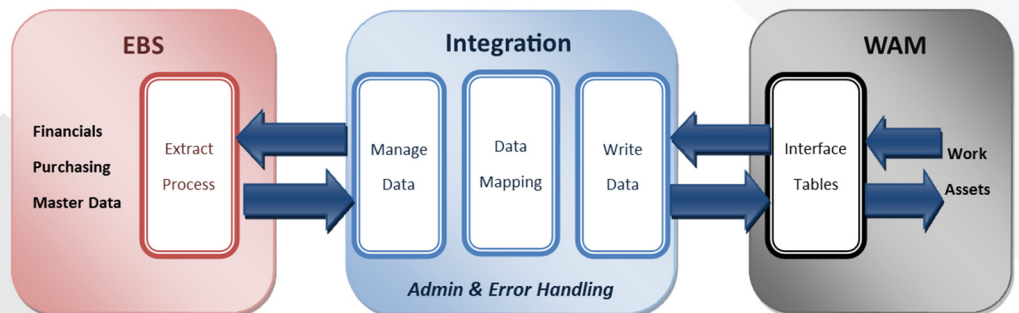

### Solution Highlights

- Core BPEL processes integrate the two applications and use standard data mapping based on XSL Transformation
- Integration leverages standard interface tables and programs
- Effectively shares thousands of objects and transactions across the two systems

Achieving full integration between the applications in your Supply Chain processes can deliver great return on investment. If your Supply Chain applications include Oracle Work Order and Asset Management (WAM) and Oracle E-Business Suite (EBS), then you know that integration between the two is notoriously complex and fraught with frustration.

AST has successfully achieved full integration between WAM and EBS using our pre-built integration tools. We can help your organization gain significant operational efficiencies with this approach. Whether you currently have no integration, some integration, or full integration between Oracle EBS and WAM products, our assessment services can provide valuable insight into your processes, and ways to improve your bottom line.

Our services include assessment, strategy, implementation guidance and execution, training, and managed services support.

## Specialized. Recognized. Preferred.
