

MuleSoft

API-led connectivity modernizes legacy systems.

With over 20 years of experience transforming organizations through technology innovation, AST is pleased to join the MuleSoft partner program as a Select Partner, while continuing to build on our reputation of excellence.

Our Platform Team has deep integration knowledge, and with expertise in key verticals, such as CX, ERP, and BI, we understand how to align solutions with enterprise-specific business goals.

We start by designing an architecture that is flexible enough to accommodate internal and external change, enabling your organization to strategize clearly and act quickly. This API-led approach directly supports business services, unlocking access to disparate systems and enabling reuse with the ability to scale as needed.

With MuleSoft's Anypoint Platform™ as the anchor, our clients expose, orchestrate, and govern data through APIs to solve their most complex integration challenges.

Specialized. Recognized. Preferred.

Our dedicated team of certified MuleSoft consultants accelerate time-to-value with the Anypoint unified integration platform.

Anypoint Platform™

MuleSoft's Anypoint Platform™ allows enterprises to deliver on their digital transformation strategies by solving the most challenging connectivity problems across SOA, SaaS, and APIs. It's a unified, highly productive, hybrid integration platform that creates a seamless application network of apps, data, and devices with API-led connectivity.
