SOA to Cloud Migration Assessment
Meaningful and Accelerated Cloud Adoption.

Key Benefits

- Accelerate Cloud Adoption & Reduce Maintenance Costs
- Upgrade to Mature, Automated DevOps Processes
- Zero-risk Cloud Lift-&-Shift
- Award-winning Team with Industry-proven Expertise
- Migrate Complete SOA Stack, Including:
  - BPEL, Mediator, OSB
  - B2B Maps
  - BAM Reporting
  - IoT Integrations
  - BPM Workflows
  - API Management
  - HA and DR Instances

Why AST

- Global Oracle Cloud Premier Platinum Partner
- 100% Certified Staff, including Oracle Architects/ TOGAF-Certified Architects
- 100% Referenceable SOA Cloud and SOA Lift-&-Shift Implementations
- CIO Review: Top 20 Most Promising SOA Providers, 2015

ORACLE® Platinum Partner

Specialized
Service-Oriented Architecture

Has your organization outlived the utility of an on-premise SOA infrastructure? Are you looking to migrate to cloud quickly and decisively? AST can assist you in making this critical move to Oracle SOA Cloud Service or to hosted SOA in the cloud (AWS/Azure). AST will execute the migration assessment process with your IT team to identify the decision factors and move through each step with planned checkpoints. From introducing SOA Cloud Service, to understanding key differences and limitations, identifying workflow changes, and using automated tools and scripts for simplifying cloud maintenance, your IT team will be guided through each step with industry best practices by our *award-winning SOA Practice.*

The SOA "lift-and-shift" engagement includes provisioning and deploying eligible workflows, assisting your team with any code changes, deployment, and testing of all migrated integration flows.

Specialized. Recognized. Preferred.

Key Deliverables from the AST team include:

- A comprehensive assessment report on current SOA maturity and key decision factors for selecting the right cloud solution (Oracle SOA-CS vs Cloud Hosted SOA);
- An end-to-end migration plan for migrating SOA integrations;
- Simple, end-to-end, automated DevOps process templates tailored for your organization;
- Provisioning, migration, and testing of SOA process flows; training for development and support teams;
- A roadmap for SOA maturity and setup of SOA Center of Excellence for continued innovation by your IT team; and
- Options for Managed Support to fully or partially manage SOA instances.
